

MUHAMMAD USAMA

ANDROID DEVELOPER | KOTLIN | JETPACK COMPOSE | FIREBASE | REST APIs

[Professional Email] | [Phone with Country Code] | Pakistan - Open to Remote / Relocation | [LinkedIn URL] | [GitHub URL] | [Portfolio URL]

PROFESSIONAL SUMMARY

Android developer focused on building reliable native mobile applications with Kotlin, Java, Jetpack Compose and XML. Experienced in API-connected business workflows, Firebase authentication and notifications, customer and order management, local session handling, SQL Server data flows and SAP-connected enterprise processes. Strong interest in clean architecture, accessible user interfaces, performance, testing and maintainable code for international product teams.

CORE TECHNICAL SKILLS

Android: Kotlin, Java, Android SDK, Jetpack Compose, XML layouts, Material Design

Architecture: MVVM, ViewModel, repository pattern, state management, modular and reusable UI components

Networking: REST APIs, Retrofit, OkHttp, Gson/JSON, authentication tokens, error and loading states

Firebase & Data: Firebase Authentication, Google Sign-In, OTP workflows, FCM, DataStore/SharedPreferences, Room concepts

Enterprise Integration: SQL Server workflows, SAP-connected processes, customer, product, order and account data

Tools & Quality: Android Studio, Gradle, Git, GitHub, debugging, crash diagnosis, testing, performance and accessibility

PROFESSIONAL EXPERIENCE

ANDROID DEVELOPER | [Company Name], [City / Country]

[Month Year] - Present

- Develop and maintain native Android application features using Kotlin, Java, Jetpack Compose and XML-based user interfaces.
- Build customer verification, authentication, profile, product, order-history, checkout, notification and account-management workflows.
- Integrate REST APIs and JSON models using Retrofit/Gson while managing authentication tokens, Firebase user data and local session information.
- Connect mobile workflows with enterprise systems and data sources, including SQL Server and SAP-connected business processes.
- Improve application stability by diagnosing API failures, crashes, Gradle/build-tool issues, memory constraints and device-specific UI problems.
- Create reusable components, clear package structures and maintainable state-management patterns to support future feature growth.
- Implement privacy-oriented account and data-management experiences, including account deletion flows and user-facing confirmation states.

SELECTED PROJECTS

ServoMart Enterprise Mobile Application | Android, Firebase, REST APIs, SQL Server, SAP

- Contributed to a business application covering registration, customer verification, login, product browsing, order processing, order history, notifications, account data and session management.
- Worked with API response models, Firebase UID/token handling, customer codes, warehouse data and business-account information used across the application.
- Focused on robust user flows, clear validation, secure handling of session data and maintainable integration between Android and backend services.

Arrow Line Master | Kotlin, Jetpack Compose, Android Game UI

- Designing a polished arrow puzzle game with level progression, hearts/lives, hints, daily challenges, achievements and saved local progress.
- Planning smooth arrow movement, wrong-tap shake and haptic feedback, zoom/pan controls, celebration animations, accessibility settings and multiple difficulty levels.
- Structuring the project into clean data, game, UI, theme and utility layers with ViewModel-based state management.

EDUCATION & CERTIFICATIONS

Degree: [Degree Name] in [Field] - [University / Institute], [City] | [Year]

Certifications: [Android / Kotlin / Firebase / Software Engineering certificates, if applicable]

LANGUAGES

English: [Professional proficiency] | **Urdu:** Native / Fluent | **Punjabi:** Fluent
